July 14, 2020

The Honorable Mike Pence  
The White House  
Office of the Vice President  
1600 Pennsylvania Ave NW  
Washington, DC 20500

Dear Vice President Pence:

During a national public health emergency, it is vital that we lead with science and with the best data available. Our continued response to and successful recovery from the COVID-19 crisis depends on adherence to sound scientific and public health guidance from the experts, including Dr. Anthony Fauci, who have made the health and safety of the public the top priority.

As organizations representing thousands of researchers, public health professionals, health care providers and others serving in scientific and health care professional fields, we object to any attempt to cast doubt on science and sow mistrust for public health expertise, and to spread misinformation during this challenging time for all Americans. Such efforts not only put the health of our population in greater peril, but also undermine the work underway to move our country beyond the pandemic and return to normalcy.

SARS-CoV-2 is a novel virus and COVID-19 is a new condition with which we have no prior experience. As is the case with any new pathogen or disease, we are learning in real time. Public health and medicine are inherently dynamic fields that adapt as the science evolves. We have embarked on an unprecedented global effort to develop medical countermeasures and refine public health guidance, and as this work uncovers new knowledge, recommendations can and will change. By heeding the recommendations of those who are on the front lines of progress to combat this virus, we have the best chance at a successful outcome.

Sincerely,
